

INNOVATIVE DRIVE TECHNOLOGY FOR DECANTERS AND CENTRIFUGES

CENTRIFUGE DRIVES – ZS/ZSP/ZP

Innovative drive technology for decanters and centrifuges

Centrifuge drives by Sumitomo Drive Technologies are optimally suited for use in decanters and screen scroll centrifuges.

A comprehensive product programme with a focus on quality and reliability make our gearboxes the most commonly used drives for centrifuges. The uses for our gearboxes span the entire bandwidth of centrifuge applications: from wastewater treatment to the extraction of olive oil, wine and other foods, bioethanol and petrochemicals, chemical raw materials and drilling sludge treatment as well as salt extraction and many other separation applications.

High throughput, low residual moisture in the solid content and exceptional purity in the liquid content: With our drives you will achieve the best results – regardless of the processing material.

A differential speed between the drum and scroll is established via the centrifuge drive. The torque applied to the scroll is transferred at the same time. The flange housing is connected to the drum and the slow speed shaft is connected to the scroll. The dynamic balancing of the gearbox also ensures extremely low vibration levels, even when running the centrifuge at high speed.

In this highly dynamic application, resulting in extremely high centrifugal forces, safety has top priority. With an all-steel housing, we ensure the stability and impermeability of the drive.

Even at peak load, you can rely on the overload capability of our drives.

Product lines

ZS – Cyclo Line

The compact and high-capacity centrifuge drive in a flange design and all-steel construction.

ZS – Cyclo Line

ZSP – Cyclo/Planet Line

The two-stage, high-capacity centrifuge drive for high reduction ratios and differential speeds with a proven flange design and all-steel construction.

ZSP – Cyclo/Planet Line

ZP – Planet Line

The highly dynamic centrifuge drive for high drum and differential speeds with a proven flange design and all-steel construction.

ZP – Planet Line

ZS – Cyclo Line

Single stage Cyclo rotation gearbox

ZS – Cyclo Line. The compact and high-capacity centrifuge drive in a flange design and all-steel construction.

The eccentric gearbox, based on two or three cycloid discs, allows high reduction ratios of up to 87:1 in a single stage. This allows for a very compact and short design. High reserves in the event of overload and few moving parts are the basis for this rugged and efficient input. The high efficiency is based on the pure roll-off movement on the cycloid discs and low splashing losses, which result from the small internal movements of the carrier system. This also leads to corresponding high thermal operating safety and almost wear-free operation, even at differential rotation speeds near "0" rpm.

The 14 sizes in the ZS – Cyclo Line provides suitable drive solutions for an extensive range of applications, from small laboratory centrifuges to large industrial centrifuges. We offer both standardised solutions for centrifuges with external or internal drives, as well as customised drives to suit individual customer specifications.

The drives in the ZS – Cyclo Line are used in centrifuges with a leading scroll. They are suitable for applications with a constant differential speed (standing high speed shaft with torque arm or single motor operation with two belts for drum and scroll) as well as for applications with an adjustable differential speed (two-motor operation with BackDrive).

The output shaft of the centrifuge drive is connected to the scroll and provides the torque required to transport the solids.

The drives are designed as shaft mounted gearboxes with a hollow shaft (DIN 5480) with involute splines on the output side as standard.

However, it is also possible to integrate the drive within the centrifuge. This also includes mounting the main bearing of the centrifuge onto the drive flange (bearing seat).

The ZS – Cyclo Line series is available in three different versions:

- **ZS** – as a shaft-mounted gearbox for internal installation
- **ZS-M** – compact shaft-mounted drive
- **ZS-L** – compact high-performance drive

Features and advantages

- Coaxial all-steel housing optimised for use with centrifuges
- Compact and short design leads to stiffer running of the centrifuge with less vibration
- Particularly suitable for mounting the belt drives of the drum AND scroll
- Long lifetime, high levels of operating safety and impact load tolerance
- Wear-free operation, even at differential speeds near "0" rpm
- Single-stage reduction ratio of up to 87:1
- 14 sizes from 300 Nm to 46 000 Nm
- Suitable for centrifuges with a leading scroll
- High efficiency and low operating temperature
- Lubrication
 - Grease lubrication (up to ZS619); intrinsically safe against leaks
 - Sealed oil filling (from ZS621, optionally ZS610 – ZS619)
- Complete housing balanced (DIN ISO 1940)
- Suitable for centrifuge models with an internal or external drive
- Design according to individual customer specifications possible
- Suitable for centrifuges with a fixed high speed shaft (torque arm), with 1 motor and double belt drive or 2 motors as a BackDrive

Optional

- "Internal" drives according to customer specifications
- Special seals
- ATEX certification in accordance with Group II
- Food grade version
- V-belt pulley for drum
- Oil once-through lubrication or oil compensation tank

ZS – Cyclo Line

ZS-L high-performance centrifuge drive

ZS – Cyclo Line

Customer-specific centrifuge drive

ZSP – Cyclo/Planet Line

Double stage Cyclo/Planetary rotation gearbox

ZSP – Cyclo/Planet Line. The double-stage, high-load centrifuge gearbox for reduction ratios and differential speeds with a proven flange design and all-steel construction.

The double stage input uses the reliable, high load Cyclo stage on the scroll side – i.e. where high torque loads occur. This Cyclo stage has also featured in the ZS – Cyclo Line series. Combination with a planetary stage enables exceptionally high reduction rates of up to 348/1. High differential speeds can also be achieved.

Drives in the ZSP – Cyclo/Planet Line are particularly suitable for medium-sized centrifuges ranging up to large industrial centrifuges. There are standardised solutions available for centrifuges with external drives, as well as integrated and customised drive solutions according to individual customer specifications.

The ZSPN and ZSPV types are suitable for applications with a constant rotation speed difference (standing high speed shaft with torque arm or single motor drive with two belts for the drum and scroll) as well as for applications with an adjustable differential speed (2-motor operation with BackDrive).

With the ZSPR type, a completely independent regulated drive is also available.

- The drum and differential speed are adjustable independently from each other. The advantage: Adjustment and control is made significantly easier.
- No energy recovery from the scroll motor. The scroll is purely motor-driven. The advantage: The drum motor and other electrical components can be sized down. All that with reduced energy consumption of the centrifuge as well.

The drives in the ZSP – Cyclo/Planet Line are suitable for all types of centrifuges:

- **ZSPN** – for centrifuges with a trailing scroll
- **ZSPV** – for centrifuges with a leading scroll
- **ZSPR** – regulated drive for centrifuges (four-shaft drive)

ZSP – Cyclo/Planet Line

ZSPN external drive with customer-specific output for trailing scrolls

ZSP – Cyclo Line

ZSPR-L external high-performance drive with regulating stage for freely adjustable differential speed

Features and advantages

- Coaxial all-steel housing optimised for use with centrifuges
- Compact design leads to stiffer running of the centrifuge with less vibration
- Long lifetime, high levels of operating safety and impact load tolerance
- Double-stage reduction ratios from 45:1 to 348:1
- 12 sizes from 630 Nm to 46 000 Nm
- Suitable for centrifuges with a leading or trailing scroll
- High efficiency and low operating temperature
- Oil bath lubrication with closed gearbox
- Complete housing balanced (DIN ISO 1940)
- Suitable for centrifuge models with an internal or external drive
- Design according to individual customer specifications possible
- Suitable for centrifuges with a fixed high speed shaft (torque arm or double belt drive) or with 2 motors with BackDrive (ZSPN/ZSPV) or 2 motors with regulating drive (ZSPR)

ZP – Planet Line

Double or triple-stage planetary rotation gearbox

ZP – Planet Line. The highly dynamic centrifuge drive for high drum and differential speeds with a proven flange design and all-steel construction. Scroll connection with DIN5480 hollow shaft.

The ZP – Planet Line series is available as a double or triple-stage planetary drive in six sizes, ranging from 5 kNm to 40 kNm. It covers the complete range of reduction ratios from 20/1 to 224/1. High power density and small exterior dimensions are a characteristic of this series. This makes it outstandingly well-suited for applications requiring a particularly high acceleration force.

Inputs in the ZP – Planet Line are particularly suitable for anything from medium-sized centrifuges to large industrial centrifuges. There are standardised solutions available for centrifuges with external drives, as well as integrated and customised drive solutions according to individual customer specifications.

The ZPN and ZPV types are suitable for applications with a constant differential speed (standing input shaft with torque arm or single motor drive with belt for drum and scroll) as well as for applications with a regulated differential speed (two-motor operation with BackDrive).

With the ZPR type, a completely independent regulated drive is also available.

- The drum and differential speed are adjustable independently from each other. The advantage: Adjustment and control is made significantly easier.
- No energy recovery from the scroll motor. The scroll is purely motor-driven. The advantage: The drum motor and other electrical components can be sized down. All that with reduced energy consumption of the centrifuge as well.

The drives in the ZP –Planet Line are suitable for all types of centrifuges:

- **ZSPN** – for centrifuges with a trailing scroll
- **ZPV** – for centrifuges with a leading scroll (triple-stage drives only)
- **ZPR** – regulated drive for centrifuges (four-shaft drive – triple-stage only)

Features and advantages

- Coaxial all-steel housing optimised for use with centrifuges
- High power density and compact outer dimensions facilitate high drum speeds
- Long lifetime and high operating safety due to high gear interlocking security and optimised shaft and planetary bearings
- Double-stage reduction ratios of up to 40:1, triple-stage 224:1
- Suitable for centrifuges with a trailing scroll (standard); optionally with a leading scroll
- Oil bath lubrication with closed gearbox
- Complete housing balanced (DIN ISO 1940)
- Suitable for centrifuge models with an internal or external input
- Design according to individual customer specifications possible
- Suitable for centrifuges with a fixed input shaft (torque arm or double belt drive) or with separate BackDrive (XPN / ZPV) or as an independent regulating drive (ZPR)

Technical information

The evolution of the Sumitomo centrifuge drives...

Our expertise in drive technology – your competitive advantage in the separation industry

- Team specialising in decanters and centrifuges
 - Comprehensive, fast and professional support
- Development and test centre in Germany
 - Basic development of centrifuge drives
 - Individually tailored drive solutions
- Production made in Germany
 - Customer-specific solutions, implemented quickly and securely
- A reliable partner in the field of drive technology for more than 85 years
- Our success is based on the invention, further development and marketing of cycloid drive technology as well as group-wide expertise in the manufacture of high-quality toothed gear mechanisms.
- With Sumitomo Drive Technologies' global service network, we can support you anywhere in the world.

Applications for centrifuges

Environmental technology

- Sludge dewatering
- Thickening of excess sludge
- Partial dewatering of sludge for agricultural use
- Process recycling of e.g. coolant liquids, drilling sludge, water etc.

Decanter for sludge dewatering

Food and raw food materials

- Oils (olive oil, palm oil, soya proteins etc.)
- Starch (maize, potato, wheat etc.)
- Recycling of edible fats
- Wine, juice
- Coffee, milk powder
- Extracts and concentrates
- Table salt
- Sugar, lactose
- Food supplements

Decanter for olive oil

Chemistry

- Raw materials of organic and anorganic chemistry
 - Extraction of metals
 - Resins and lacquers
 - Alkalis, acids and industrial salts
 - Solvents
 - Technical grease
- Petrochemicals and plastic manufacture
 - PVC, HDPE
 - Polymer solutions
 - Polycarbonates
 - Ethanol
- Raw materials
 - Pigments
 - Calcium carbonate
 - Kaolin
- Pharmaceutical products

Screen scroll centrifuges for plastic granule extraction
